

SHAHAR KEISAR

Senior Android Engineer · Architecture-First · AI-Augmented Development

Tal Shahar, Israel • 050-9008266 • keisardev@gmail.com

[DevSphere Blog](#) • [GitHub](#)

PROFESSIONAL SUMMARY

Android engineer who thinks in architecture first — modular Kotlin codebases, SOLID principles, and UDF as the foundations for testable, scalable systems. Equally passionate about building people up through knowledge sharing and collaborative engineering culture. Brings **Agentic AI Orchestration** into the daily workflow, automating scaffolding and quality gates. Extends naturally into **KMP** for multiplatform when the product demands it.

CORE COMPETENCIES

- **AI Orchestration & DevEx:** Agentic Workflow Design (Claude Code), Context Engineering, Automated Refactoring Pipelines, LLM-driven Test Generation, Semantic Code Search, On-device (Llamatik) + Cloud (Koog) AI Agents.
 - **Modern Mobile Architecture:** MVI/MVVM — ViewModel + Navigation 3 / Circuit, Compose-driven state management. DI: Metro (primary), Hilt, Anvil, Koin. Offline-first architecture, Modularization strategies, Design Systems (Compose Multiplatform).
 - **Kotlin Multiplatform (KMP):** Single-source Domain/Data logic, Expect/Actual patterns, Concurrency (Coroutines/Flow), Ktor Networking, Room/SQLDelight, Multiplatform targets (Android, iOS, WASM, Desktop).
 - **Performance & Quality:** Baseline Profiles, Microbenchmarking, Snapshot Testing (Paparazzi/Roborazzi), CI/CD Automation, Convention Plugins (Kotlin DSL), KSP & FIR (K2 Compiler Frontend) Code Generation.
-

PROFESSIONAL EXPERIENCE

Bit, Tel-Aviv — Dec 2023 – Present

Senior Mobile Engineer & AI Architect

Context: P2P payment app serving 2M+ users. Led a 5-member Android team toward a robust, testable architecture—one that puts scalability and simplicity at its core—while introducing AI-augmented development practices and conducting technical hiring interviews.

- **Architecture Transformation:** Led the migration from Fragments to Jetpack Compose, coached the team on Compose fundamentals, and grounded the codebase in SOLID and Strategy patterns. Drove adoption of Hilt, Circuit (UDF) + Metro DI (compile-time injection), achieving 90% business-logic test coverage and a scalable multi-module architecture.
- **System Design:** Architected the end-to-end mobile data layer—offline-first sync with conflict resolution for payment flows, versioned API contracts with structured error handling, and cache invalidation policies for financial data (Room). Defined the module dependency graph enforcing strict layer boundaries, enabling parallel team development. Implemented secure session management with token refresh, biometric authentication, and encrypted storage.
- **Team Leadership & Empowerment:** Led architecture decisions, Gradle problem-solving, and cross-team knowledge sharing for the 5-member Android team. Championed a learning culture—established weekly sessions teaching Android fundamentals, Compose best practices, Circuit/Metro patterns, and AI-driven workflows. Mentored team members to embrace ownership of architectural decisions.

- **Engineering Excellence:** Drove 100% native Kotlin development, championed baseline profiles and Macrobenchmarking—improving app startup by 70%, reaching 99.98% crash-free rate, and increasing delivery velocity by 60% through shared architecture and AI-augmented tooling. Developed KMP tools to streamline common project workflows, boosting developer productivity across the team.
- **AI Orchestration:** Designed and built a full Agentic AI development system using Claude Code—custom skills for KMP scaffolding, subagent orchestration for multi-step refactors, and Git hooks for automated quality gates—reducing new-feature setup time from hours to minutes.
- **Context Engineering:** Engineered context-aware code generation pipelines: agents that read existing architecture, generate module scaffolds conforming to team conventions, and produce test stubs—all validated through automated CI before merge.

MsApps, Herzliya — May 2021 – Dec 2023

Android Developer

- Led development of 12 production applications (6 built from scratch) within a 10-developer mobile team, delivering 90% of Android output in Kotlin and Java, plus iOS (Swift) and React Native cross-platform work.
- Initiated an engineering culture of knowledge sharing—organized learning sessions on Android best practices, code review standards, and architectural fundamentals for the 10-person team, raising the collective technical bar.

JustYou App, Tel-Aviv — Mar 2021 – May 2021

Mobile Developer

- Built mobile features using React Native for a consumer-facing application.

PrizeTag, Remote — Sep 2020 – Mar 2021

Android Developer

- Developed native Android features in Kotlin, integrating BLE and NFC tag communication for a proximity-based consumer product.

OPEN SOURCE & PORTFOLIO PROJECTS

- **Insight** — KMP showcase app demonstrating Metro DI + Circuit architecture with on-device AI capabilities. Multiplatform, compile-time DI with Compose-driven state management. ([GitHub](#))
- **MoviesAndBeyond** — Multi-module Android app (TMDB API) with Clean Architecture, Hilt DI, Compose UI, Room offline caching, and WorkManager sync. 141 commits, MIT licensed. ([GitHub](#))
- **NoteNest** — Modular note-taking app with Roborazzi screenshot testing, Macrobenchmark, offline-first Room architecture, and Material 3 dynamic theming. ([GitHub](#))

EDUCATION

HackerU — Sep 2019 – Jul 2020

Application Development — Android, iOS, and Web
